

## **TOPIC: STRATEGIES TO LOWER THE TOTAL COST OF OWNERSHIP**

### **QUESTION: Where do you see this technology in the future?**

“They’re always updating the Ubuntu operating system software. I see this on a continual basis. They’re gonna keep updating this software. With the newer machines that are coming out nowadays, a lot of them require... heavy requirements. So, I look at the Ubuntu operating system as something that will be able to work on your older machines and also work on your newer machines. You can reduce your IT costs by maintaining one operating system. You can move all of your computers over to one platform and reduce your IT costs.”
