

**TOPIC: TECHNICAL SOLUTIONS TO INCREASE EFFICIENCY**

**QUESTION: Are there other alternative ways do the same thing as the technology you are familiar with?**

“In the past there were what’s called emulators that did, sort of, the same thing as virtualization. But, emulators, most of the time, you were running entirely different architecture on different underlying architectures. So, you’d have a different CPU running in the emulator than underneath it. Nowadays that we’ve moved on to virtualization, you’re virtualizing the same architecture in both places, so it just goes faster.”
